

CAREER OBJECTIVE

Motivated Electronics and Communication Engineering undergraduate with a strong interest in Core Electronics and VLSI design. Seeking an entry-level opportunity to apply embedded systems and hardware knowledge while gaining hands-on industry experience and developing as a VLSI professional.

EDUCATION

B.E., Electronics and Communication Engineering - M. Kumarasamy College of Engineering CGPA: 7.34	2023 – 2027
HSC, State Board of Tamil Nadu - Bharathi Higher Secondary School, Velliyanai, Karur Score: 479 / 600 (79.83%)	2022 – 2023

SKILLS SUMMARY

- **Programming:** C, Java
 - **HDL:** Verilog
 - **Embedded:** Arduino, Embedded C
- **Tools:** Arduino IDE
 - **Domains:** Embedded Systems, Core Electronics, VLSI Fundamentals

PROJECTS

Advanced Automatic Medical Waste Segregation Bot with Sanitizing Technology
Designed an embedded-based automated system for hospital waste collection and segregation. Segregates waste into metal, biodegradable, and non-biodegradable categories. Includes automatic floor sanitization to improve hygiene and reduce human exposure. Focused on real-time operation and reliability for healthcare environments.
Tech: Embedded Systems, Sensors, Arduino, Embedded C

Aerogenerator Fan with Power Monitoring System
Developed a system to generate electrical energy from ceiling fan rotation using an aerogenerator mechanism. Implemented rectification, energy storage, and regulated output for powering low-power appliances. Monitored generated voltage and current for performance analysis and efficiency evaluation.
Tech: Generator, Rectifier Circuit, Energy Storage, Embedded Monitoring

INTERNSHIP & ACHIEVEMENTS

IoT and Robotics Intern - Covai Tech Solutions Completed a 1-month internship in IoT and Robotics, working on system concepts, robotic control, and sensor integration.	Jun 2025 – Jul 2025
Runner-up - SRISTHI 2024 (Kerala) Recognized for innovative project development and technical execution.	2024

CERTIFICATIONS

Sensors and Actuators - NPTEL	Jan – Apr 2025
Software Testing - NPTEL	Jul – Oct 2025

AREAS OF INTEREST

Core electronics system design with focus on analog and digital circuits.
VLSI design fundamentals including digital logic and HDL modeling.
Embedded system development integrating microcontrollers, sensors, and real-time control.
